DHS\DHS 1755-1780 (Rev. 0) (Sufficient) - Interactions

Interaction Name	Interaction Description
1. Funding	Pre-auction funds are provided for technological development of capabilities necessary to relocate into alternative frequency bands.
2. Alternate Assignments	Channel assignments for digital video specific channels in the 1675-1695 MHz, 1785-1850, and 2200-2290 MHz bands are granted and will diminish potential interference issues.
3. Frequency Coordination	Channel assignments are coordinated across the Federal law enforcement community to diminish the potential for interference with a Federal-wide band plan developed.
4. Technology Development	The necessary development of technologies and devices to support overall surveillance operation relocation will progress to align with transition schedule needs.
5. Regulatory Criteria	Regulatory criteria will support relocated operations in the alternate bands and policy or legislative changes will be made to ensure adequate priority for surveillance operations in the selected bands.
6. Fed Agency Incumbent Spt	If necessary, the incumbents will support interference testing to determine feasibility of co-existence and necessary equipment alterations, and they will support the relocation plan and equipment deployment as necessary to address interference issues. As operations move to other spectrum such as 2200-2290 MHz band there is a potential for interference with incumbent operations which may result in the need for testing of devices to determine means for co-existence. To support this testing the need may arise for agencies to provide equipment for testing at an various locations including independent lab such as ITS boulder. It is not envision that the incumbents would be required to share the testing cost beyond providing the equipment for testing.
7. Commercial Carrier Coord	Commercial carriers will coordinate with the Department to minimize mutual interference prior to the department vacating the band as outlined in transition timelines in this plan.

Releasable

DHS\DHS 1755-1780 (Rev. 0) (Sufficient) - Impact Factors

<b>Factor Name</b>	<b>Factor Description</b>
1. Data Validation	Coordination is required to verify GMF data.
2. Alt Frequency Assignments	Interactions are required to determine the best option from various alternate frequency assignment choices and to obtain formal approval of new frequency assignments prior to beginning of transition period.

DHS\DHS 1755-1780 (Rev. 0) (Sufficient) - Notes

Note Name	Note Text
1. Executive Summary - 1	<p>The Department of Homeland Security (DHS) remains committed to supporting the President’s Spectrum Initiative and has developed this plan as follow-on to the September 2011 report assessing of the Viability of Accommodating Wireless Broadband in the 1755-1850 MHz Band. As noted in the 2011 report, the Department and components use the spectrum being vacated for two primary missions, 1: video surveillance in support of Federal law enforcement operations at Immigration and Customs Enforcement, the US Secret Service, the DHS Office of Inspector General and the Federal Law Enforcement Training facility (training purposes only) and 2: microwave data links connecting remote Customs and Border protection offices.</p>
1. Executive Summary - 2	<p>For the video surveillance operations, the Department will utilize spectrum currently assigned in the 2200-2290 MHz, 4400-4940 MHz, and on a limited basis spectrum in the 1780-1850 MHz band. Utilization of existing spectrum in the 2200-2290 and 4400-4940 MHz bands currently shared by other federal law enforcement agencies will allow for increased interoperability of technologies. Operations requiring deep building penetration will be relocated to spectrum favorable to building penetration, e.g. 2200-2290 MHz, and operations with less stringent building penetration requirements will be shifted to the 4400-4940 MHz bands. The strategy of relocating to multiple bands aligns with operational needs and affords the opportunity to mitigate risks associated with relocating to a single candidate band. In addition relocating to spectrum where DHS and other law enforcement agencies currently operate will allow for increased sharing of equipment and technologies. Key to this strategy is the deployment of spectrally efficient digital mesh technologies that allow operations to fit within reduced overall spectrum. The use of digital mesh technologies provide for increased spectrum reuse with a reduced total spectral footprint and thus increase the number of potential uses within a given frequency channel. For the microwave data links, the Department will continue its migration of systems to the 7-8 GHZ band. This approach allows for rapid integration into the systems that were migrated as part of the earlier 1710-1755 MHz exit.</p>
1. Executive Summary - 3	<p>The 2011 report the Department’s estimate to vacate the 1755-1780 MHz portion of the 1755-1850 MHz band was ~\$564M. Since the time of the report DHS has worked closely with the Office of Management and Budget, the Department of Justice, the National Telecommunications and Information Administration in developing this plan and preparing for the exit of the 1755-1780 MHz band. As a result of the close working relationship, the Department’s cost estimate has been reduced by ~\$74M, a substantial cost savings. To achieve this cost savings, the Department’s strategy consolidates the management of the video operations migration to mesh technologies utilizing an integrated project team with representation from the affected entities, reducing duplication of project management functions. This approach takes into consideration the operational aspects of critical mission capabilities as we migrate to spectrum efficient technologies that are interoperable and sharable with other Federal law enforcement agencies.</p>
