

Existing Standards, Tools, and Initiatives Working Group

NTIA Multistakeholder Process
on IoT Upgradability and Patching

July 18, 2017, Meeting

Update on WG Status

- Gathered references, with short analyses, of 30+ standards
- Catalog appears to have broader potential use than just as an internal working document for the other WGs
 - Consider publishing more broadly
- Ongoing work: separating technical standards from high-level guidelines.
 - Both are important!
- One challenge is to complete this – we need volunteers who know about these and other standards
- Keeping it current will be another ongoing challenge
